Medical Cannabis for the Blockchain Era

SHORTER | MAY 2019

MedK

Cannabis production has evolved to be the fastest growing industry in today's world. Possessing powerful properties to cure various chronic diseases, the medical cannabis industry attributes to 52% of the total cannabis market.

MARKET OVERVIEW

The major factors for the growth of the medical marijuana market include the increasing number of countries legalizing the use of medical marijuana, trend of producing edible products with cannabis, and favorable reimbursement environment and government support in selected countries, which are expected to experience a boost over the forecast period.

Each year, the legal use of cannabis for medical and recreational purposes is steadily growing, but it varies across countries, based on the possession, distribution, cultivation, and medical indications for its consumption. Therefore, over the forecast period, the change is expected to be slow, but more legal consumption of cannabis is expected in the developed market, which is expected to largely drive the market studied.

MARKET OVERVIEW

Currently, there is also an increasing use of marijuana as a functional food, with purported health benefits far outnumbering what consumers can get from kale, turmeric, or kombucha. With the new generation growing up in the United States, where cannabis is legal, new products are found rapidly entering the market, which is expected to grow rapidly over the forecast period. The growth of the market is also attributed to factors, like the trends of producing edible products with cannabis in selected countries. Therefore marijuana is expected to be included in the 2018 food trends, as the drug and its ingredients have been gradually making their way into the public market.

Doctors also prescribe medical marijuana to treat muscle spasms caused by multiple sclerosis, nausea, poor appetite, and weight loss, caused by chronic illness, such as HIV, nerve pain, and Crohn's disease. Thus, with the increasing applications, there is a huge opportunity for marijuana for medicinal purposes as well.

Our Solution For MedK

Strain selection

The plants which show to have the best genetics will be selected to act as mother plants, which ensures our company will have the best possible plants and genetics to work with.

Growing Operations

In order to provide for the necessary varieties of cannabis base product required for the research to be carried out by company, three types of grow facilities are to be established in the future: outside (field - for high CBD oil), greenhouse and indoors.

Harvesting

Most of the experimental fields should be harvested with specialized agricultural machinery. After harvesting the stems, seeds and flower material of the hemp/cannabis plants need to be separated for further processing.

Benefits Of Cannabis oil

Cannabis oil is widely beneficial and is considered as one of the most effective oils for the alleviation of certain conditions and illnesses.

Researchers believe there are at least two active chemicals in cannabis that have medicinal applications: cannabidiol and tetrahydrocannabinol. Cannabidiol, also known as CBD, impacts the brain without a high, and tetrahydrocannabinol, also known as THC, has pain relieving properties.

- ✓ Can Relieve Pain
- ✓ Could Reduce Anxiety and Depression
- ✓ Can Alleviate Cancer-Related Symptoms
- ✓ May Reduce Acne
- ✓ Might Have Neuroprotective Properties
- ✓ Could Benefit Heart Health
- ✓ Several Other Potential Benefits

What we want to build

MEDK is proposing the establishment of greenhouse cannabis in an ecological system according to the European Union standards, by introducing economically efficient technologies that will ensure optimal conditions for the activity in accordance with the current market requirements, as well as the increase the added value of the products made through conditioning activities, respectively the creation of an integrated food chain through investments in production links - conditioning - storage - processing – marketing.

The project proposes to acquire equipment corresponding to the projected technological flows and construction works and installations for the creation of the specific infrastructure, namely:

- Primary agricultural production (including conditioning), with sampled operations of cannabis cultivation in ecological system as well as conditioning (sorting and labeling and refrigeration storage in order to preserve the integrity of primary agricultural production).
- Construction and installation infrastructure

Benefits Of Blockchain In MedK Project

- ✓ Keeping the evidence of each strain of cannabis;
- ✓ Keeping complete evidence of CBD production;
- ✓ Fast: Rapid transactions and confirmations with 2.5 minute block times;
- ✓ Cheap: Low spending with less fees;
- ✓ Scalable: Support and fast blocks provide ample transaction bandwidth;
- ✓ Future-proof: Lightning network support provides instant transactions and future scalability;
- ✓ Banking data protection;
- ✓ Transparent maintenance of funds;

Phrase II: 25%
Phrase III: 10%
Phrase IV: 5%

Phrase IV
1 MedK = \$ 0.20

About Company

The **MedK** project is a part of **Security Soft** company, which is registered in London, United Kingdom, with the following number: 11604878. Right from the beginning, the team has come with people with extensive IT experience, but also with many consultants with expertise in medicine, agriculture, design, stock market.

With: an excellent team of scientists, cannabis species, advanced technologies and a solid community, we expand our knowledge of cannabis use with the establishment of high-level research standards to help us in achieving great results and reinvent this area of the medical world.

Main activities of the company:

- launching Tokens based on Blockchain ERC-20 technology
- securing IT Infrastructure
- software development in the medical field
- integrate processes for automating solutions

Based on the wide experience acquired throughout our collaboration with the companies that launched tokens on the ICO Market, we decided to initiate our highlight project and release the company's own coin named MEDK, in order to finance and uphold the project with the same name, which consists in planting and growing cannabis cultures for the aim of extracting the CBD OIL, to be used only in medical research.
